

Journal of Mobile Multimedia

Aims and Scope:

Mobile Multimedia refers to the multimedia information exchange over wireless networks or wireless Internet. The popularity and evolution of mobile computing devices, together with fast, affordable mobile networks, have made it possible to increase the range and complexity of mobile multimedia applications and services provided to end-users of these kinds of equipments. In the core of this revolution is the astonishing growth in the number, types, novelty, and complexity of mobile multimedia applications and services.

The Journal of Mobile Multimedia (JMM) aims to provide a forum for the discussion and exchange of ideas and information by researchers, students, and professionals on the issues and challenges brought by the emerging multimedia technologies for mobile multimedia applications and services, and the control and management of such networks to support multimedia applications.

The journal is devoted to the publications of high quality papers on theoretical developments and practical applications in mobile multimedia. Original research papers, state-of-the-art reviews, and technical notes are invited for publications.
