

AUTHORS INDEX

QIC Vol.3 (2003)

<p>A-E</p> <p>S. Aaronson, <i>Quantum lower bound for recursive Fourier sampling</i>, (2) 165</p> <p>A. Acin (I), <i>On the structure of a reversible entanglement generating set for tripartite states</i>, (1) 55</p> <p>A. Acin (II), <i>Security bounds in quantum cryptography using d-level systems</i>, (6) 563</p> <p>A. Ahmadi, <i>On mixing in continuous-time quantum walks on some circulant graphs</i>, (6) 611</p> <p>S.J. Akhtarshenas, <i>L-S decomposition for 2x2 density matrix by using Wootters's basis</i>, (3) 229</p> <p>J. Altepeter, see N. Peters</p> <p>K. Banaszek, see A.B. U'Ren</p> <p>S. Beauregard, <i>Circuit for Shor's algorithm using 2n+3 qubits</i>, (2) 175</p> <p>H. Bechmann-Pasquinucci, <i>Bell inequality for qubits with binary measurements</i>, (2) 157</p> <p>R. Belk, see A. Ahmadi</p> <p>Th. Beth, see P. Wocjan</p> <p>D. Bouwmeester, see A. Lamas-Linares</p> <p>D. Branning, see N. Peters</p> <p>G.K. Brennen, <i>An observable measure of entanglement for pure states of multi-qubit systems</i>, (6) 619</p> <p>N.J. Cerf, see F. Grosshans</p> <p>H. Chen, <i>Necessary conditions for efficient simulation of Hamiltonians using local unitary operations</i>, (3) 249</p> <p>K. Chen, <i>A matrix realignment method for recognizing entanglement</i>, (3) 193</p> <p>P.-X. Chen, <i>Local distinguishability of quantum states and the distillation of entanglement</i>, (3) 203</p> <p>A.M. Childs, <i>Asymptotic entanglement capacity of the Ising & anisotropic Heisenberg interactions</i>, (2) 97</p> <p>C.-L. Chou, <i>Non-empty quantum dot as a spin-entangler</i>, (4) 307</p> <p>J.I. Cirac (I), see E. Jané</p> <p>J.I. Cirac (II), see A. Acin</p> <p>J.I. Cirac (III), see G. Giedke</p> <p>M.M. Donegan, see J.D. Franson</p> <p>W. Dür, see E. Jané</p> <p>J. Eisert, see G. Giedke</p> <p>S.J. van Enk (I), see T. Laustsen</p> <p>S.J. van Enk (II), <i>Quantum communication protocols using the vacuum</i>, (5) 423</p>	<p>F-K</p> <p>M.J. Fitch, see J.D. Franson</p> <p>J.D. Franson, <i>Experimental Progress in Linear Optics Quantum Computing</i>, (s) 553</p> <p>C. Fuchs (I), <i>book review on "Statistical Structure of Quantum Theory" by A.S. Holevo</i>, (2) 191</p> <p>C.A. Fuchs (II), <i>Squeezing quantum information through a classical channel: measuring the "quantumness" of a set of quantum states</i>, (5) 377</p> <p>S. Giannini, <i>Information theoretic aspects in ponderomotive systems</i>, (3) 265</p> <p>G. Giedke, <i>Entanglement transformations of pure Gaussian states</i>, (3) 211</p> <p>N. Gisin (I), see H. Bechmann-Pasquinucci</p> <p>N. Gisin (II), see A. Acin (II)</p> <p>H-S. Goan, <i>An analysis of reading out the state of a charge quantum</i>, (2) 121</p> <p>D. Gottesman, <i>Unclonable encryption</i>, (6) 581</p> <p>Ph. Grangier, see F. Grosshans</p> <p>F. Grosshans, <i>Virtual entanglement and reconciliation protocols for quantum cryptography with continuous variables</i>, (s) 535</p> <p>G.-C. Guo, see G-P. Guo</p> <p>G.-P. Guo, <i>Entanglement of individual photon and atomic ensembles</i>, (6) 627</p> <p>J.C. Howell, see A. Lamas-Linares</p> <p>W.T.M. Irvine, see A. Lamas-Linares</p> <p>B.C. Jacobs, see J.D. Franson</p> <p>M.A. Jafarizadeh, see S.J. Akhtarshenas</p> <p>E. Jané, <i>Simulation of quantum dynamics with quantum optical systems</i>, (1) 15</p> <p>D. Jozsa, see P. Wocjan</p> <p>E. Jeffrey, see N. Peters</p> <p>R. Jozsa, <i>Entanglement cost of generalised measurements</i>, (5) 405</p> <p>B. Julsgaard, <i>Atomic spins as a storage medium for quantum fluctuations of light</i>, (s) 518</p> <p>A. Kaltchenko, <i>Universal compression of ergodic quantum sources</i>, (4) 359</p> <p>J. Kempe, <i>3-Local Hamiltonian is QMA-complete</i>, (3) 258</p> <p>M. Keyl, <i>Infinitely entangled states</i>, (4) 281</p>	<p>K-R</p> <p>C. King, <i>Maximal p-norms of entanglement breaking channels</i>, (2) 186</p> <p>A. Klappenecker, see G. Song</p> <p>M. Koashi, see R. Jozsa</p> <p>P. Kok, <i>Web-corner update</i> (6), (3) 280</p> <p>P. Kwiat, see N. Peters</p> <p>A. Lamas-Linares, <i>Generalized Bell inequalities with parametric down-conversion</i>, (s) 417</p> <p>T. Laustsen, <i>Local vs. joint measurements for the entanglement of assistance</i>, (1) 64</p> <p>D.W. Leung, see A.M. Childs</p> <p>B. Lev, <i>Fabrication of micro-magnetic traps for cold neutral atoms</i>, (5) 450</p> <p>C.-Z. Li, see P.-X. Chen</p> <p>N. Linden, see R. Jozsa</p> <p>S. Mancini (I), <i>Entanglement and nonlocality for a mixture of a pair-coherent state</i>, (2) 106</p> <p>S. Mancini (II), see S. Giannini</p> <p>Ll. Masanes, <i>Tight Bell inequality for d-outcome measurements correlations</i>, (4) 345</p> <p>N.D. Mermin, <i>Books review on "A shortcut through time" by G. Johnson, and "The quest for the quantum computer" by J. Brown</i>, (5) 465</p> <p>P. Milman, see H. Ollivier</p> <p>J. Muller-Quade, <i>On the problem of authentication in a quantum protocol to detect traffic analysis</i>, (1) 48</p> <p>S.R. Nichols, <i>Between entropy and subentropy</i>, (1) 1</p> <p>H. Ollivier, <i>Proposal for realization of a Toffoli gate via cavity-assisted atomic collision</i>, (6) 603</p> <p>J. Pachos, <i>Generation and degree of entanglement in a relativistic formulation</i>, (2) 115</p> <p>N. Peters, <i>Precise creation, characterization, and manipulation of single optical qubits</i>, (s) 503</p> <p>T.B. Pittman, see J.D. Franson</p> <p>M.B. Plenio, see G. Giedke</p> <p>E. S. Polzik, see B. Julsgaard</p> <p>S. Popescu, see R. Jozsa</p> <p>S. Presnell, see R. Jozsa</p> <p>J. Proos, <i>Shor's discrete logarithm quantum algorithm for elliptic curves</i>, (4) 317</p> <p>O. Regev, see J. Kempe</p> <p>T. Rudolph, see S.J. van Enk (II)</p>

M. Sasaki, see C.A. Fuchs (II)
V. Scarani, see A. Acin (II)
D. Schlingemann (I), see M. Keyl
D. Schlingemann (II), *Logical network implementation for graph codes and cluster states*, (5) 431
C. Schori, see B. Julsgaard
D. Shepherd, see R. Jozsa
Y.-Y. Shi, *Both Toffoli and Controlled-NOT need little help to universal quantum computing*, (1) 84
E. Solano, see J. Pachos
G. Song, *Optimal realizations of controlled unitary gates*, (2) 139
J. L. Sorensen, see B. Julsgaard
R. Steinwandt, see J. Muller-Quade
C. Tamon, see A. Ahmadi
H. Terashima, *Einstein-Podolsky-Rosen correlation seen from moving observers*, (3) 224
P. Tombesi (I), see S. Mancini
P. Tombesi (II) see S. Giannini
R. Tualle-Brouri, see F. Grosshans
M. Ueda, see H. Terashima
A.B. U'Ren, *Photon engineering for quantum information processing*, (s) 480
F. Verstraete (I), see T. Laustsen
F. Verstraete (II), see A.M. Childs
G. Vidal (I), see E. Jané
G. Vidal (II), see A. Acin
G. Vidal (III), see A.M. Childs
I.A. Walmsley, see A.B. U'Ren
W. Wang, see W. Wu
C. Wenzler, see A. Ahmadi
J. Wenger, see F. Grosshans
R.F. Werner, see M. Keyl
A. Winter, see R. Jozsa
P. Wocjan, *Two QCMA-complete problems*, (6) 635
R. de Wolf, *book review On "An Introduction to Quantum Computing Algorithms (A.O. Pittenger)", "Quantum Computing (M Hirvensalo)", and "Classical and Quantum Computation (A. Yu. Kitaev, A. Shen, and M.N. Vyalvi)"*, (1) 92
W.K. Wootters, see S.R. Nichols
L.-A. Wu, see K. Chen
W. Wu, *Dynamics of distillability*, (1) 38
E.-H. Yang, see A. Kaltchenko
X. X. Yi, see W. Wu
Ch. Zalka, see J. Proos
P. Zoller, see E. Jané
