| <p>A. Acin, see R. Thew<br/>                     I.Ali Khan, <i>Reconciling cloning fidelities</i>, (2) 114<br/>                     A. Ambainis, <i>Distributed construction of quantum fingerprints</i>, (2)146<br/>                     V. Arvind, <i>Non-stabilizer quantum codes from Abelian subgroups of the error group</i>, (s) 411<br/>                     D.H. Aschauer, <i>Local invariants for multi-partite entangled states allowing for a simple entanglement criterion</i>, (5) 383<br/>                     K.M.R. Audenaert, <i>Multiplicativity of accessible fidelity and quantumness for sets of quantum states</i>, (1) 1<br/>                     A. Barchielli, <i>Instrumental processes, entropies, information in quantum continual measurements</i>, (s) 437<br/>                     S.M. Barnett, <i>Optical demonstrations of statistical decision theory for quantum systems</i>, (s) 450<br/>                     C.H. Bennett, <i>A resource-based view of quantum information</i>4, (s) 460<br/>                     G.P. Berman, <i>Quantum dynamics of the oscillating cantilever-driven adiabatic reversals in magnetic resonance force microscopy</i>, (2) 102<br/>                     B.B. Blinov, see L-M Duan<br/>                     F. Borgonovi, see G.P. Berman<br/>                     S. Bravyi, <i>Compatibility between local and multipartite states</i>, (1) 12<br/>                     S. Bose, see M-H Yung<br/>                     H.J. Briegel, see D.H. Aschauer<br/>                     T.A. Brun, <i>Measuring polynomial functions of states</i>, (5) 401<br/>                     D. Bruss, see F. Hulpke<br/>                     S.S. Bullock, I, <i>Asymptotically optimal circuits for arbitrary n-qubit diagonal computations</i>, (1) 27<br/>                     S.S. Bullock (II), <i>Note on the Khameja Glaser decomposition</i>, (5) 396<br/>                     J. Calsamiglia, see D.H. Aschauer<br/>                     S.J. Devitt, see A.G. Fowler<br/>                     D.P. DiVincenzo, see B.M. Terhal<br/>                     L-M Duan, <i>Scalable trapped ion quantum computation with a probabilistic ion-photon mapping</i>, (3) 165<br/>                     M. Ericsson, see T-C Wei<br/>                     M. Fleischhauer, see D. Witthaut<br/>                     A.G. Fowler, <i>Implementation of Shor's algorithm on a linear nearest neighbour qubit array</i>, (4) 237<br/>                     C.A. Fuchs, I, see K.M.R. Audenaert<br/>                     C.A. Fuchs, II, <i>On the quantumness of a Hilbert space</i>, (s) 467<br/>                     A. Fujiwara, <i>Statistical estimation of a quantum operation</i>, (s) 479</p> | <p>T. Gao, <i>Quantum logical networks for probabilistic teleportation of many particle state of general form</i>, (3) 186<br/>                     D. Gavinsky, <i>Quantum solution to the hidden subgroup problem for Poly-Near-Hamiltonian groups</i>, (3) 229<br/>                     V. Giovannetti, <i>Classical capacity of free-space optical communication</i>, (s) 489<br/>                     N. Gisin, see R. Thew<br/>                     P.M. Goldbart, see T-C Wei<br/>                     D. Gottesman, <i>Security of quantum key distribution with imperfect devices</i>, (5) 325<br/>                     L. Grover, <i>How significant are the known collision and element distinctness quantum algorithms?</i>, (3) 201<br/>                     A. Grudka, see A. Wójcik<br/>                     S. Guha, see V. Giovannetti<br/>                     M. Hein, see D.H. Aschauer<br/>                     L.C.L. Hollenberg, A.G. Fowler<br/>                     J.C. Howell, see I.Ali Khan<br/>                     F. Hulpke, <i>Simplifying Schmidt number witnesses via higher-dimensional embeddings</i>, (3) 207<br/>                     C. King, I, see K.M.R. Audenaert<br/>                     C. King, II, <i>Comments on multiplicativity of maximal p-norms when p=2</i>, (s) 500<br/>                     A.A. Klappenecker, I, <i>On the structure of nonstabilizer Clifford codes</i>, (2) 152<br/>                     A.A. Klappenecker, II, see G. Song<br/>                     P. Kok, <i>Webcorner Update</i>, (2) 161<br/>                     P.P. Kurur, see V. Arvind<br/>                     L. Lanz, <i>On consistency of quantum theory and macroscopic objectivity</i>, (s) 513<br/>                     J.I. Latorre, <i>Ground state entanglement in quantum spin chains</i>, (1) 48<br/>                     D.W. Leung, see M-H Yung<br/>                     M. Levenstein, see F. Hulpke<br/>                     S. Lloyd, see V. Giovannetti<br/>                     H-K Lo, see D. Gottesman<br/>                     G. Lupieri, see A. Barchielli<br/>                     N. Lutkenhaus, see D. Gottesman<br/>                     L. Maccone, see V. Giovannetti<br/>                     I.L. Markov, see S.S. Bullock<br/>                     D. Mayers, <i>Self testing quantum apparatus</i>, (4) 273<br/>                     O. Melsheimer, see L. Lanz<br/>                     D.L. Moehring, see L-M Duan<br/>                     C. Monroe, see L-M Duan<br/>                     W.J. Munro, see T-C Wei<br/>                     K.R. Parthasarathy, see V. Arvind<br/>                     J. Preskill, see D. Gottesman</p> | <p>A.A. Razborov, <i>An upper bound on the threshold quantum decoherence rate</i>, (3)222<br/>                     E. Rico, see J.I. Latorre<br/>                     M. Rotteler, See A.A. Klappenecker<br/>                     T. Rudolph, see Grover<br/>                     M.B. Ruskai, see C. King, II<br/>                     A. Sanpera, see F. Hulpke<br/>                     M. Sasaki, <i>Toward implementation of coding for quantum sources and channels</i>, (s) 526<br/>                     D. Schlingemann, <i>Cluster states, algorithms and graphs</i>, (4) 287<br/>                     J.H. Shapiro, see V. Giovannetti<br/>                     Y-Y Shi, see A. Ambainis R. Thew, <i>Experimental realization of entangled qutrits for quantum communication</i>, (2) 93<br/>                     P.W. Shor, <i>The classical capacity achievable by a quantum channel assisted by limited entanglement</i>, (s) 537<br/>                     G. Song, <i>Optimal realizations of simplified Toffoli gates</i>, (5) 361<br/>                     B.M. Terhal, <i>Adaptive quantum computation, constant depth quantum circuits and Arthur-Merlin games</i>, (2) 134<br/>                     V.I. Tsifrinovich, see G.P. Berman<br/>                     B. Vacchini, see L. Lanz<br/>                     G. Vidal, see J.I. Latorre<br/>                     Z-X Wang, see T. Gao<br/>                     T-C Wei, <i>Connections between relative entropy of entanglement and geometric measure of entanglement</i>, (4) 252<br/>                     R.F. Werner, <i>The uncertainty relation for joint measurement of position and momentum</i>, (s) 546<br/>                     A. Winter, see K.M.R. Audenaert<br/>                     A. Winter (II), <i>Quantum and classical message protect identification via quantum channels</i>, (s)563<br/>                     D. Witthaut, <i>Relation between discrete and continuous teleportation using linear elements</i>, (2) 122<br/>                     A. Wójcik, <i>Erasure versus teleportation scheme of optical CNOT gate</i>, (5) 373<br/>                     F-L Yan, see T. Gao<br/>                     A. Yao, see D. Mayers<br/>                     B.J. Yen, see V. Giovannetti<br/>                     H.P. Yuen, V. Giovannetti<br/>                     M-H Yung, <i>An exact effective two-qubit gate in a chain of three spins</i>, (3) 174<br/>                     H. Zbinden, see R. Thew<br/>                     C-W Zhang, <i>Entanglement concentration of individual photon pairs via linear optical logic</i>, (3) 196</p> |
